## Overview of the Project :

Pharmacy Shop Management System Project is computer-based software developed for managing, monitoring and recording various activities of medical stores. It plays a key role in improving the productivity of medical stores through automated functions. It also helps to overcome the manual pharmacy management issues.

## Objectives :

- ❖ It is a time saving of both the customer and chemist by doing order from home.
- ❖ Educating patients & healthcare professionals on the safe use of medication.
- ❖ Using a social media also get familiar to the users, who oftenly uses it.

## System Users :

- Pharmacist
- Patient/Customer
- Doctor

### Pharmacist

The scope of pharmacy practice includes more traditional roles such as compounding and dispensing of medications, and it also includes more modern services related to health care, including clinical services, reviewing medications for safety and efficacy, and providing drug information. They can easily give service in minimum time span and a good suggestion to every patients and customer. An online pharmacy management software will also help you to manage stores in multiple locations effectively.

### Patient/Customer

Customer/Patients can receive a easily all the things without disturbing their routine. They get online platform where they can get everything medicines, health product and advices from the expertise at home. Also by online booking ,the troubles they faces get reduces in this way.

## Doctor

The advantage of Internet prescriptions is convenience. With a few keystrokes on the computer, prescriptions are filled and delivered by mail or can be picked up at a local pharmacy. Internet prescriptions are especially useful for seniors and people with disabilities who may have difficulty leaving the house and get review from the experts. Also doctors can get more time to attend others.

## Software Requirements

### 1. Text Editor :

- Visual Studio Code
- Git Bash
